

MySQL – Mac OSX

If you installed the XAMPP server, you can start MySQL server as follows:

From Applications, open XAMPP and then manager-osx. Click the **Manage Servers** tab as shown below.

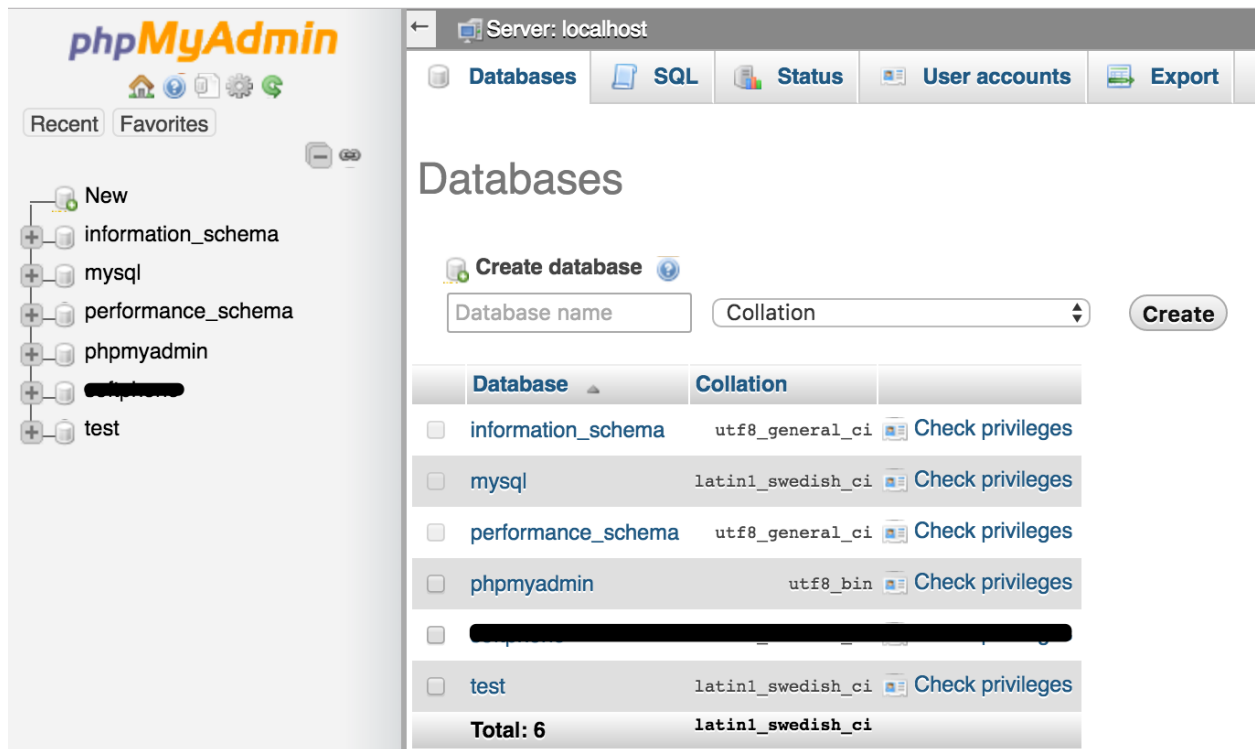

If the Status of MySQL Database shows as Stopped, select that line and click Start. The status will change to Starting... and then to Running as shown below.

Using the browser, open the URL <http://localhost/phpmyadmin/>

Click the Databases tab.

We will be using the Database “cs602db”. Create the database cs602db. After the database is created, click on the “cs602db” database and then select the “SQL” tab.

Creating a user account for the “cs602db” database

Type the following SQL command and click “Go”. This creates a user cs602_user with password cs602_secret that can do all operations on all the tables in the **cs602db** database.

```
GRANT ALL PRIVILEGES ON cs602db.* TO cs602_user@localhost identified by 'cs602_secret'
```
